

# Apptimized TO GO Hypervisor Integration

## Enable Apptimized TO GO hypervisor connector

The one-time configuration is available for project administrators under **Settings** in the project menu > **Virtualization providers** option > **To Go** switch.

Apptimized shows the following screen when successful:

The **To Go** switch enables the TO GO hypervisor connector implementation within the project.

Yes ☐ To Go

☐ No

\*\*\*\*\*

The option to specify within what workflow step the TO GO hypervisor connector will be implemented enables when the switch is activated in front of the step name.

The **User name** and **Password** fields come prefilled.

The **Host** field defines the IP address or DNS name of a resource that contains Virtual Machines (i.e., **10.159.11.2:1233** or **somesite.hive.com**).

When the value to the **Host** field is added, the **Create new image** button appears.

Cancel

The created custom operating system image must contain the installed **TO GO agent**. Otherwise, the VM will not be available via a virtual desktop environment using the RDP proxy server. The VM becomes in the ready status when TO GO agent sends a request to the Apptimized Portal to receive the manifest.

Table 2. Image settings

Setting	Description
Name	This setting defines the name for a new Azure image. The naming is a user preference. This field is required.
Platform	This setting defines the name of the Windows platform (i.e., <b>Windows 10</b> ).
OS Build	This setting defines the operating system build that will be used (i.e., <b>18363.753</b> – is an OS build for Windows 10, version 1909). OS build is a timeline of minor build releases in between the major version number releases.

OS Version	<p>This setting defines the operation system version that will be used.</p> <p>The following options available:</p> <ul style="list-style-type: none"> <li>• Windows 7;</li> <li>• Windows 8;</li> <li>• Windows 10.</li> </ul> <p>The default value is <b>Windows 10</b>.</p>
OS Language	<p>This setting defines the operating system language mode.</p> <p>The following options available:</p> <ul style="list-style-type: none"> <li>• EN;</li> <li>• DE.</li> </ul> <p>The default value is <b>EN</b>.</p>
OS type	<p>This setting defines the operating system type mode.</p> <p>The following options available:</p> <ul style="list-style-type: none"> <li>• Windows Server;</li> <li>• Desktop Windows.</li> </ul> <p>The default value is <b>Windows. Server</b>.</p>
Enabled	<p>This setting indicates that the current image is enabled for use.</p>
Base snapshot	<p>This setting defines the name of the snapshot (a captured state of a system in a particular time point). It is usually used as a back-up copy or as a basis to troubleshoot issues.</p> <p>This field is required.</p>
Base image	<p>This setting defines the name of the existed operating system image which can be used as a basis for this image.</p> <p>This field is required.</p>

The custom operating system image settings apply when clicking on the **Create** button. Apptimized shows the following screen when successful:

The option to modify the custom operating system image settings is available under the **Edit image** button.

**Note.** When the TO GO hypervisor connector option is implemented for the project, a customer receives the full scope of the Apptimized discovery and testing functionality on VMs with the custom operating system image.
