

IntuneWin Bulk Conversion

IntuneWin Bulk Conversion feature allows users to migrate their **SCCM** packages to **intunewin** format using an automated tool.

Apptimized sends the **follow-up email** when the user has accessed the **IntuneWin Bulk Conversion feature**:

Welcome [REDACTED],

Thank you for your recent trial subscription to our IntuneWin Bulk conversion solution!

Your login credentials:

Login: [REDACTED]

Password: [REDACTED]

[Log in to Apptimized](#)

Your password is auto-generated. We recommend you change it after login to protect your account.

To get started, we recommend checking out our:

[IntuneBulk User Manual](#)

This will walk you through the basics of our Apptimized platform and show you how to get started with the IntuneWin Bulk conversion service.

What's next? We have created your first project, and filled it with the 10 most wanted apps by our users. You can now process with converting these applications to IntuneWin format or you can give it a try and upload your own packages for conversion.

If you have any questions or feedback, or would like to cancel your subscription, please feel free to contact the Apptimized Support team via live chat and schedule a call with one of our specialists.

Thanks,

Your Apptimized Team

PS: We hope you're enjoying your experience with us! As always, feel free to reach out to us.

We'd love to hear from you.

Table 1. IntuneWin Bulk Conversion Settings

Option	Details
[PackageName] placeholder value	This option shows a construction of the PackageName that will be applied to the result package
Name of result archive	This option provides a result package archive name template
Detection method script template	This option shows a PowerShell script template which will be used to check if the package is installed or uninstalled
Path to store .intunewin file	This option shows the Intunewin file location in the result package structure
Path to store detection method file	This option shows a detection method file location in the result package structure
Path to store txt file with deployment commands	This option provides information about txt file with deployment commands location in the result package structure
Path to store extracted content of .intunewin file	This option shows the Intunewin package extracted content location in the result package structure
Key file to detect the package location	This option shows the file name in the source archive that points to the level where the package is located (e.g. Deploy-Application.exe for PSADT packages)
An entry point file for Intune wrapping	This option provides a file name used for intunewin conversion as an entry point (usually, it's an installation file without arguments)

Install commands	This option provides the installation file name with arguments
Uninstall commands	This option provides the uninstallation file name with arguments
Responsible people to receive notifications	This field gives information about people who will receive an email notification if the conversion for the particular application fails
Testing image	This option allows choosing the image that will be used for testing incoming packages
Skip incoming packages testing	If this option is enabled, the applications will be converted without incoming packages testing

Bulk Conversion Creation

To create the first **Bulk Conversion** a user should go to **Bulk conversions > IntuneWin**.

The following screen will be displayed:

On this page all Bulk Conversions a user creates will be displayed.

The "**Create Bulk Conversion**" button should be pressed to proceed.

A user has to enter **a name of a conversion** in the following field:

Create IntuneWin bulk conversion for Intune Bulk Conversion project

IntuneWin bulk conversion name *

Selecting applications for converting to the **.intunewin format** is available in the next window:

Applications

Settings

Select condition for application displaying: -- x v

* The maximum application count per conversion is 200. If the count is more than 200, the first 200 will be processed.

When hovering over the **“Pending”** status, information about the **position in queue and estimated launch time** will be shown.

Table 2. Stages

Stage	Details
Pending	The application in the queue and is ready to be converted
Testing	The incoming app is going to be tested to make sure installation and uninstallation works properly
Wrapping	The application is being wrapped to the. intunewin format

Table 3. Statuses

Status	Details
Pending	The application in the queue and is ready to be converted
In progress	The current stage is in progress
Skipped	If the “Skip incoming packages testing” option is enabled in conversion settings, the status will be set to the “Testing stage”

Failed	A conversion is failed for some reason
Removed	The application is removed from bulk conversion and should be processed manually
Success	A conversion is finished successfully

When the conversion completes, a user will receive **corresponding email notification**:

IntuneWin migration 'bulktest' completed

Dear Bogdan,

We are happy to inform you that 'bulktest' IntuneWin bulk conversion has been successfully completed.

Start date: Tuesday, 21 May 2024 14:29:51 UTC

Completion date: Tuesday, 21 May 2024 17:40:10 UTC

Total applications converted: 1

Number of applications removed: 0

If you have any questions or require further assistance, please feel free to contact our support team at support@apptimized.com.

Thank you for choosing our services, and we look forward to continuing to support you,

Your Apptimized Team

As a result, **Bulk Conversion Status** will be set to “Completed”.

Importing Own Packages

In addition to working with predefined packages in the trial project, it is possible to import own packages to attempt converting them to the .intunewin format.

To learn how to import the packages into the project, please follow this [link](#).

It's important to note that the application **metadata** and the **PackageName** components used in the package **should match exactly**.

2. Metadata

Select the main installer to extract its name and version information automatically from the list of files below, or enter the data into the fields to the right manually.

VideoLAN_VLCMediaPlayer_3.0.21_x64_MUI_01.zip

Prior to start converting the imported packages, it's important to review the conversion settings if anything should be changed. If a user struggles with understanding which settings should be changed, he should contact **Apptimized support team**.

Error Handling

In case the conversion for the particular application fails, a user will receive an email notification with detailed information about the issue:

IntuneWin migration failure of SWS_MX-Soft_MX-Panel_1.0.0.5_English(U.S.)_X64-X86

Dear Bogdan,

We want to inform you that our recent attempt to migrate 'SWS_MX-Soft_MX-Panel_1.0.0.5_English(U.S.)_X64-X86' to the IntuneWin format encountered an error. Below are the details of the issue:

Application Name: SWS_MX-Soft_MX-Panel_1.0.0.5_English(U.S.)_X64-X86

AppID: 51

Error Message: Installation failed.

You can follow this link to see the bulk conversion details:

[Go to Apptimized portal](#)

If you have any questions or require further assistance, please feel free to contact our support team at support@apptimized.com.

Thank you for understanding and cooperation,

Your Apptimized Team

The conversion item status will be changed to '**Failed**'.

The hint with explanation of the reason for the failure will be shown:

In case the installation or uninstallation of incoming package fails as shown on the screenshot above, it's required to **check the package and fix problems manually**.

After the package is fixed, the archive should be re-uploaded to the Portfolio item. A user should go to **Dashboards > Portfolio**.

Finding a **failed application** in the Dashboard list is available by clicking on the “**Settings**” action button.

A user should click on the “**Reupload source**” button and **re-upload fixed package archive**.

To **restart the conversion process for the following item**, a user goes back to **Bulk Conversion > “Restart”** action button.

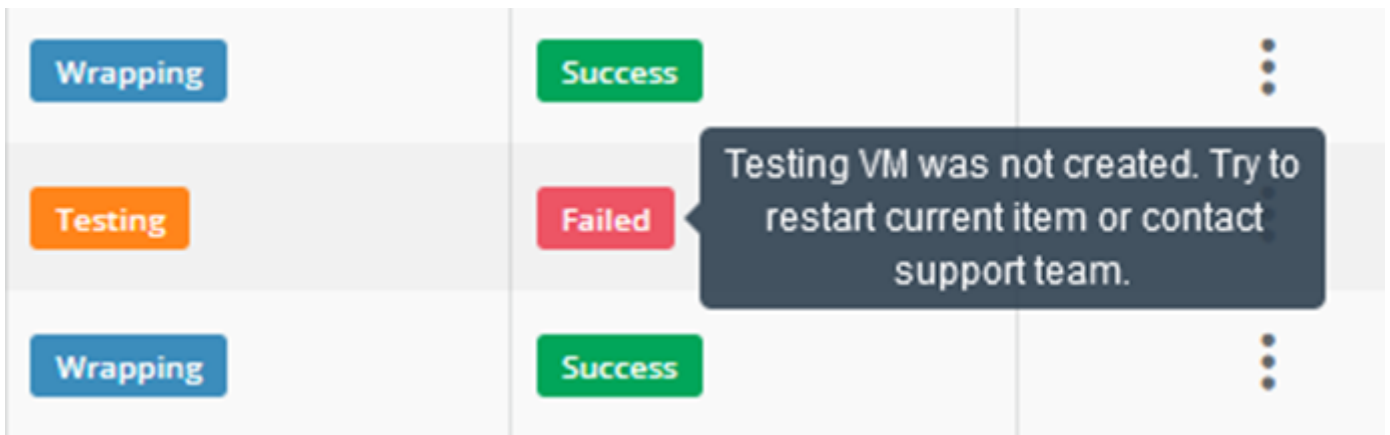

In case it doesn't work, a user can skip testing the application by clicking on the **“Mark test as success”** action button.

Additionally, by using the **“Mark as removed”** action button, **an application can be removed from the conversion process** if it cannot be converted automatically for any reason. The application needs to be manually converted in this case.

If the **conversion for the particular application fails** for a technical reason, a user can try **to restart the conversion**. If it doesn't help, he should contact the **support team**.
